

## **Our Mission**

UCode's Mission is to provide quality "live" coding education to children ages 8 to 18 at a cost that is affordable for any family.

As a society we have never experienced change like we are experiencing now and it is discomfoting. Drone deliveries, driverless cars, facial recognition, digital assistants, robots. The speed and rate of technology change is driving inequality of income and opportunity, with the result that we increasingly live in a society of haves and have nots. And what is most concerning is that these technology trends are accelerating.

Regardless, of what you believe about robots and AI replacing workers, the jobs of the future will require different skills and these skills are generally only available to the digital aristocracy. Children without these skills will face a very limited future as an adult, perpetuating the inequalities we see today.

The solution to the fundamental problems that our society must address is Education. Education is society's most valuable social good. It is the ladder to prosperity for all families. Yet, it is only available to a select few.

Our mission is to change that.
